worldwide roofing systems

Beautiful, durable or economical?

Is this your toughest question about your new roof? We've made it easy for you.

Metrotile, a contemporary roofing solution, provides a **no-compromises solution** between aesthetics, durability, and economic efficiency. We have designed **the right roof for you**. Tested and trusted in extreme weather conditions, a 40-year weatherproof warranty backs our products. Metrotile stone-coated lightweight roof will make you consider using metal roofing on your house.

Durable. Attractive. Economic. Lightweight. Get all the benefits for new-build or renovation projects with Metrotile products.

That makes a difference

Lightweight

Metrotile roof tiles are **approx. 1/7 of the weight of traditional heavy clay or concrete tiles**. They are compactly packed, fitting up to 360 tiles on one pallet – enough to cover a roof area of about 160 sq. m.

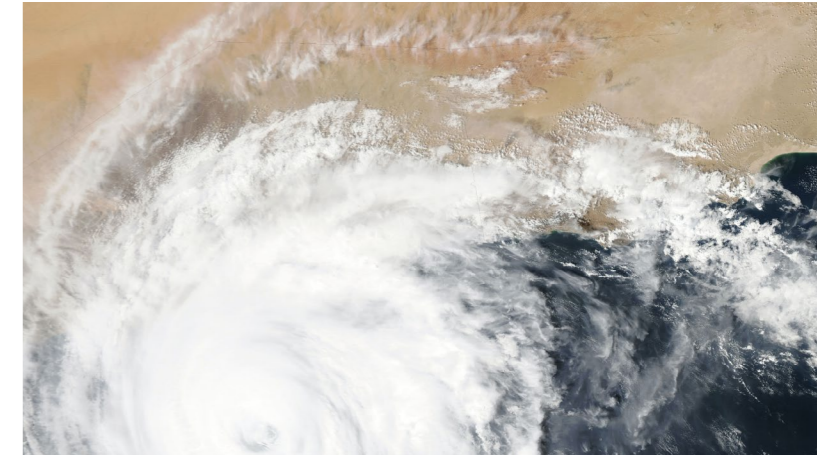

Why is being lightweight important? **Less cost on new roof or reroofing**. Less load on the foundation. Hassle-free delivery even in hard-to-reach areas. Fast and easy installation.

Storm-proof

The durability of Metrotile is due to our unique 8-point-horizontal installation, which makes it able to **withstand high winds, cyclones even hurricanes**, according to our experience worldwide.

What does special installation mean? Every single tile is fixed with nails in 8 different places. Horizontally. After installation, the roof becomes a single surface, and almost no wind can rip it off. Moreover, according to our market feedback, there are virtually **no hail stones big enough** that could **penetrate this personal shield above your home**.

Irresistible aesthetics

You may still be wondering... Technically, it sounds like the right roof, but how can I like a metal roof? When you see our roof, **you will not even notice it is made of steel**.

Why? Thanks to its natural stone coating, even the powder-coated profiles look so modern and stylish that it will be hard to resist. With **15 profiles** in various architectural styles and **45 colours**, you will be spoiled with a dazzling array to choose the right style for your house.

Natural stone chip-coated roof tile

Beautiful appearance, noise insulation and snow retention – Metrotile’s lightweight metal roof tiles owe all this to their **natural stone coating**. That, together with industry-leading UV protection and a weatherproof construction invulnerable to wind or hail, ensure that your roof will look just as perfect decades later as it did on day one.

Overglaze

The final coat to the tile bonds the chip thoroughly to the basecoat, leaving it virtually encapsulated by an acrylic film. This enhances the **attractive “water wet” gloss**, and further increases **resistance to physical damage**.

Stone Chip

The game changer – **it makes all the difference**. This aesthetic product is the difference between the right metal roof and poor-quality alternatives. Providing 100% chip coverage and tile protection for the product’s lifespan, you can buy with confidence.

Basecoat

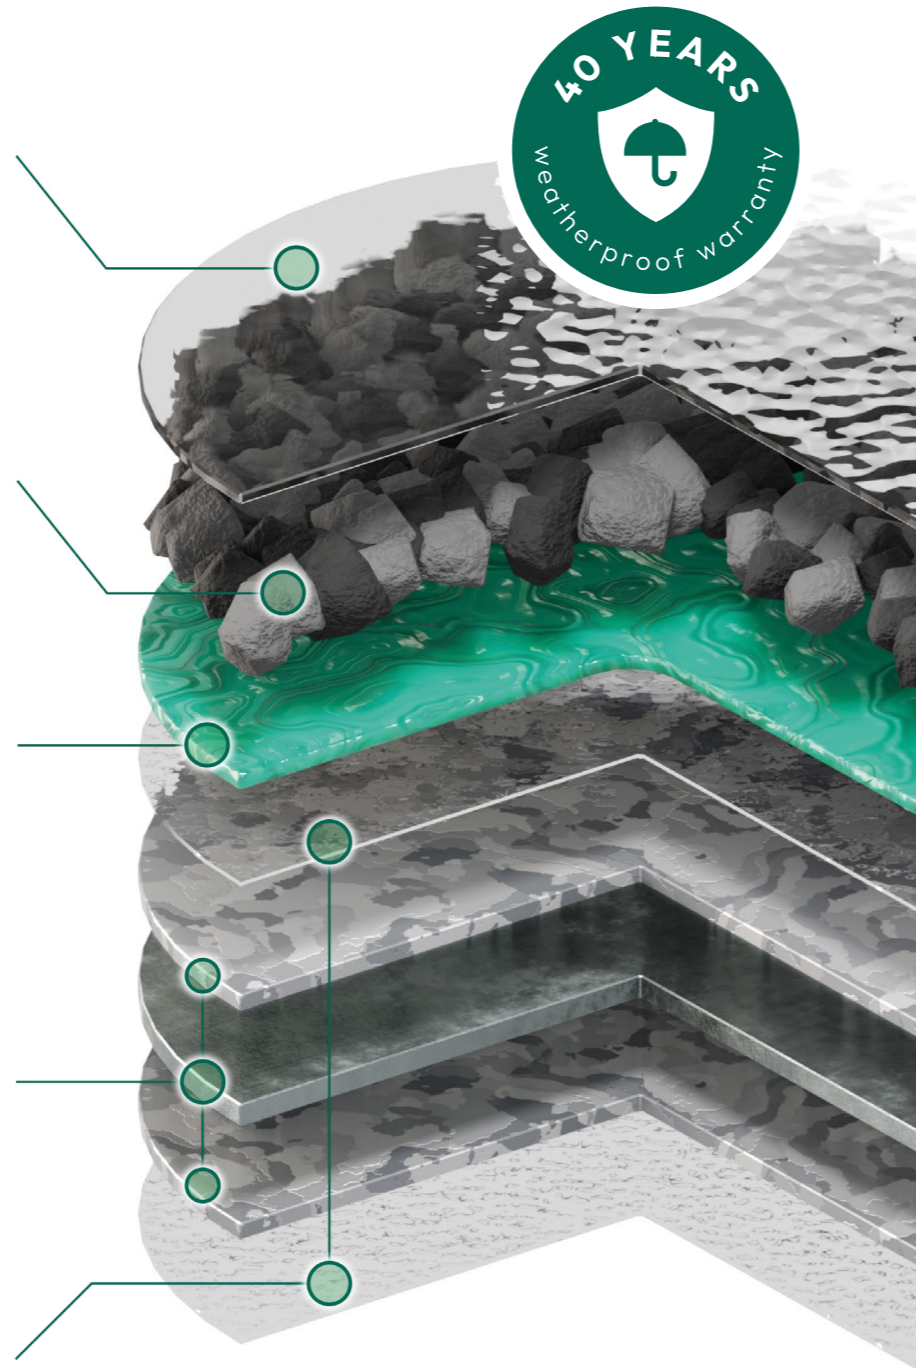

The chips are bonded to the tile using a super tough polymer acrylic coating (basecoat), which simultaneously protects the underlying layer **from water and UV radiation**.

Steel

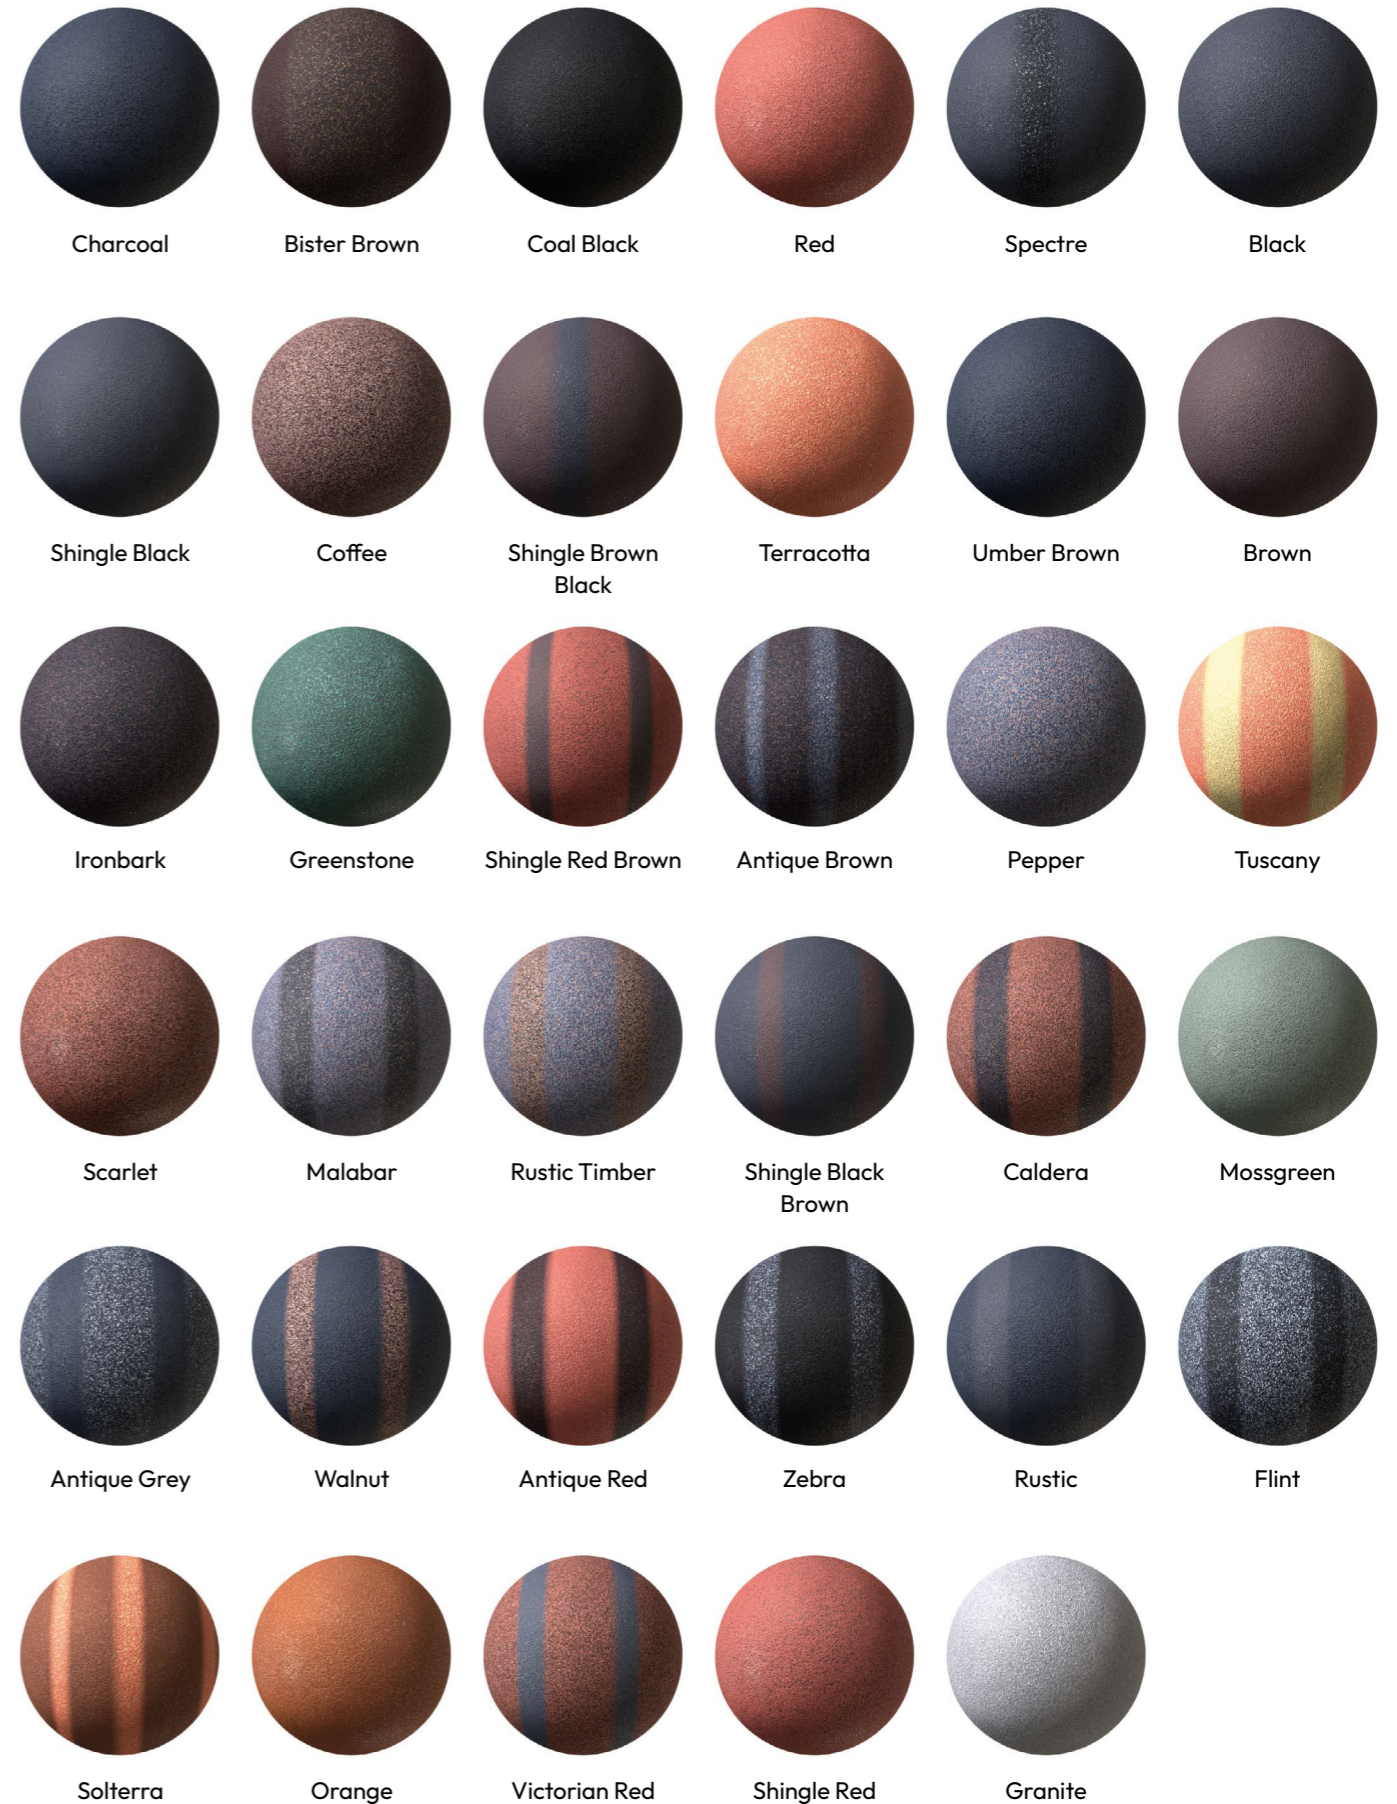

Steel forms the heart of the Metrotile tile. The unique protective layer of Aluminium-Zinc (55% Aluminium, 43.4% Zinc and 1.6% Silicon) on the top-quality steel body results in **superior durability and strength**.

Transparent Acrylic Coating

The double transparent acrylic coating with a thickness of 1.2 microns provides a uniform substrate that **enhances the adhesion of subsequent topcoats** (basecoat).

Stone-coated

Elegant powder-coated roof tile

Metrotile steel powder-coated roofing products offer extraordinary aesthetics and reliability for all types of roofs. They are finished with a super durable, stylish, scratch and UV-resistant powder coating which is heated to a high temperature and baked into the tile. After pressing, this coating and baking process ensures a continuous, even layer and prevents micro-cracking in the bends of steel roof products that are painted first and then pressed or rolled into shape.

Powder coating

Super **durable, stylish, scratch and UV-resistant** 80-micron polyester powder coating preserve the beauty and integrity of the tile surface throughout the entire lifetime.

Polyurethane primer

A special primer that provides additional barrier **protection and corrosion resistance** to the steel core and enhances the adhesion of powder coating.

Zinc-Aluminium-Magnesium alloy

The unique alloy composition of 93.5% Zinc, 3.5% Aluminium and 3% Magnesium provides superior **corrosion resistance** in combination with powder coating.

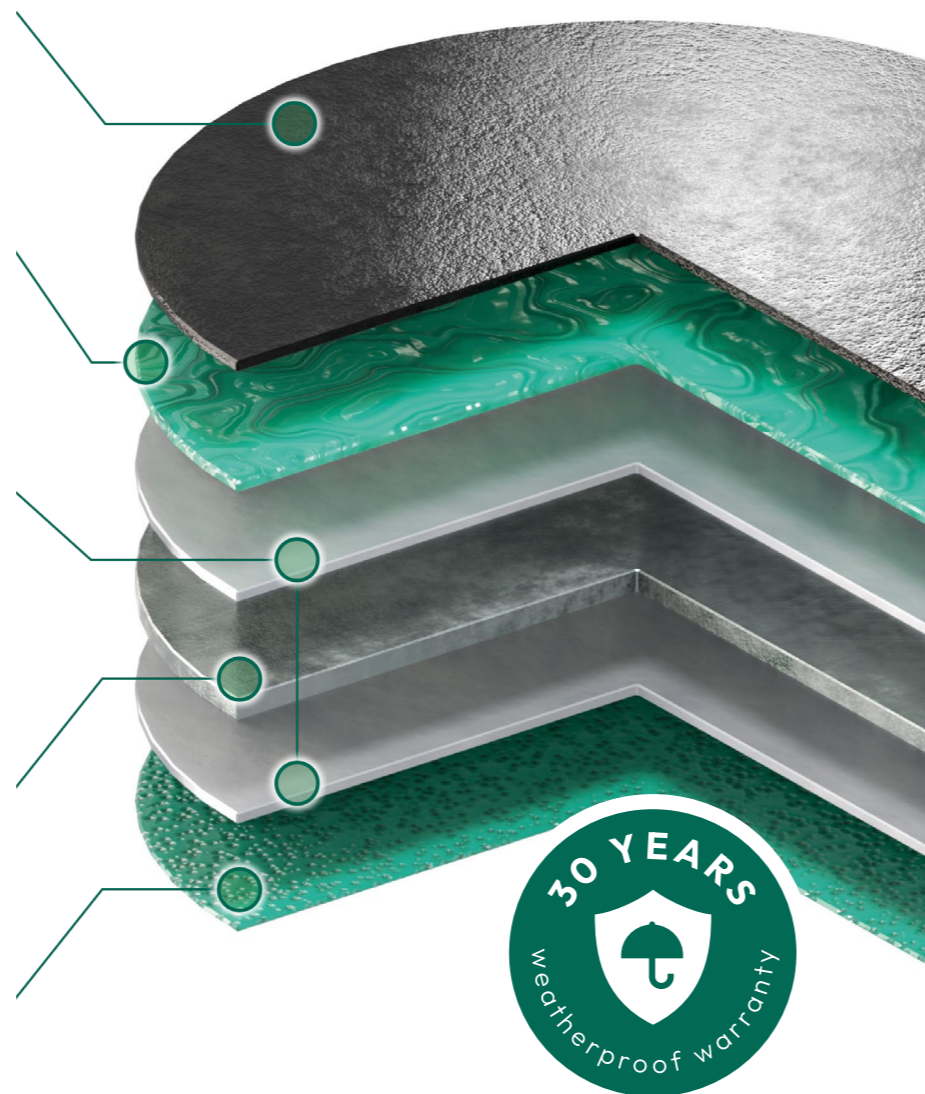

Steel

A durable, rigid, lightweight steel core provides Metrotile painted tiles with **strength, rigidity and light weight** .

Polyester backer

Providing superior **corrosion resistance** at the underside of the tile

Colors

Solar Panels – Installation-friendly

Solar panels with a compatible solar holder system are easy to install on Metrotile metal roofs. They can be installed together with the roof tiles or at any later stage.

Pitching
15°-90°

Easy installation

Handling and cutting are easy and perfect for reroofing.

Full Range of Accessories

Metrotile can deliver you a complete roof solution. We provide everything you need for a start-to-finish roof installation. We have barrel trims, ridges, ridge caps, barges, side flashings, end caps, and anything else you might need, all available in the exact colour you want to match your favourite Metrotile roof tile. Get shingles and all the necessary accessories to make your roof installation hassle-free.

Choose from ultra-modern high-tech profiles or go for a more traditional look.

100% Recyclable

Steel is 100% recyclable, as many times as you wish. Due to its light weight, it requires less framing timber, thus saving trees – the green roofing solution for our age.

Reroofing

The lightweight and rapid installation of Metrotile steel roof tiles make them ideal for reroofing. There might be no need to reinforce the truss structure, and in some cases, **it can even be installed straight onto the existing roof** with only the help of additional new battens saving you time and money.

Reroofing with Metrotile is a perfect choice if you want it done quickly, economically, and effortlessly.

The World's Largest Manufacturing Facility for Steel Roofing Tiles

Long weatherproof warranty

Metrotile's products have been manufactured in Europe since 1998. The production site in Tongeren, Belgium, covers over 20,000 square meters. This state-of-the-art, automated manufacturing plant produces roof tiles **for over 80 countries**. Metrotile is partnered with about 30 businesses and official local distributors across all European countries.

Rest assured, knowing that the superb quality of Metrotile products will last for the lifespan of your roof.

With a **40-year warranty** on stone-coated tiles and a 30-year warranty on painted ones, you don't have to worry about leaks or weather damage.
